Lanode Launches Fiber Optic Telephone Extender in UK.

London - 4th December 2007 - Lanode, a leading provider of network equipment, consultancy and deployment services, announces the launch of the FRM220. The FRM220 extends analogue telephony over fiber optic cabling. Specifically designed for UK military applications, the FRM220 is ideal for use in fiber break in the red/black divide. The FRM220 is for use in subscriber or exchange facing operation and is available in variants of singlemode or multimode optics, that can reach up to 120km.

The Benefits:

- The FRM220 is a physically small unit, less than half the size of any competing unit.
- The FRM220 is available as a standalone unit comprising of a card that can be mounted into single chassis. However, for a high density solution, cards be fitted into the two U, twenty card chassis. When mounted in the chassis single cards allow remote configuration and monitoring of the fiber transmission network.
- The simple to set up FRM220 is configured via a single dip switch. Furthermore, Lanode offer free lifetime telephone support to all their customers.
